Check Point 1100 Appliances
Quick Start Guide

Includes Check Point Software Blades
1

Power Up Check Point 1100 Appliance

- Connect the power cable to the power port on the 1100 Appliance rear panel. Plug the power supply unit into a power outlet.
- The Power LED on the front panel will light, indicating that the appliance is turned on.
- The Notice LED on the front panel will start blinking, indicating the appliance is booting up. When the Notice LED is turned off, the appliance is ready for login.

2

Connect Your Check Point 1100 Appliance to the Internet

- Connect the included Ethernet cable to the WAN port on the 1100 appliance rear panel and plug it into your external modem or router's PC/LAN network port.
- The WAN Link LED on the front panel will light when connection is established.
For ADSL Models:

- Connect the included telephone cable to DSL port on the 1100 Appliance rear panel and plug it into ADSL line socket.
- DSL Link LED on the front panel will light when connection is established.

**Important Note:** you must have a microfilter connected to each socket on the line the ADSL is enabled on, even if you will not connect the ADSL modem to that socket.

3

**Connect Your PC for Initial Setup**

- Connect another Ethernet cable to the LAN1 port on the 1100 Appliance rear panel and plug it into the network adapter on your PC.

  - The LAN1 Link LED on the front panel will light, indicating that the cable is connected properly.
Instruction for Microsoft Windows:

- **On Windows* 7:**
  - Click 🍎 > Control Panel > Network and Sharing Center.
  - Click “Local Area Connection.”

- **On Windows 8:**
  - On your desktop, go to Apps > Control Panel > Network and Internet > Network and Sharing Center.

  • Click “Change Adapter Settings.”
  • Right-click on “Local Area Connection”
  • Click on “Properties” and then double-click “Internet Protocol Version 4 (TCP/IPv4).”
  • Make sure that “Obtain an IP address automatically” and “Obtain DNS server address automatically” are chosen.
  • Click “OK” and close the dialog boxes.

**Note** – To check your Windows version:
Press “Win”+R buttons, in the opened window type “winver” and press “Enter”. A dialog will pop up showing you your Windows version

Instructions for Mac OS X:

- **On MAC OS:**
  - Choose System Preferences from the Apple menu
  - Select Network Preference
  - Select Ethernet on the left side of Network window
  - Set Configure IPv4 to Using DHCP
  - Press Apply
Configure Your Check Point 1100 Appliance

- Launch the Web browser and type http://my.firewall or https://192.168.1.1:4434 in the address bar.

**Note** – You might receive a certificate error page since the appliance does not have a formally signed certificate. Click “Continue to this Web site.”

**Note** – If you are using a FireFox Web browser, you will be prompted to add an exception in order to connect. Click “Add Exception,” then “Get Certificate” and finally “Confirm Security Exception.”

- The wizard will guide you through the connection setup process. Fill in the parameters as required and click Finish.

For additional information regarding setting up your appliance, refer to the 1100 Appliance Getting Started Guide.
Registration and Technical Support

Appliance Registration
The appliance is provided with a 30-day evaluation license key.

You can activate your full license using the First Time Configuration Wizard through the License page by pressing “Activate License” button (click “Set proxy” to configure proxy settings if needed). Your device will automatically contact and register itself with Check Point’s User center, providing it has been configured with Internet access.

In case the appliance is not connected to the Internet, click “Offline?”, browse to your license activation file and press “Activate License”. To obtain your license activation file visit http://register.checkpoint.com.
