Replacing 12400 Appliance Power Supply Unit

12400 Appliances have a redundant power supply unit. If necessary, you can replace a power supply or placeholder unit.

**Important** - Make certain that you are electromagnetically grounded when performing the following procedures. Static electricity can damage the appliance.

Removing Power Supply Units

To remove a power supply unit:
1. If the alarm sounds, press the red alarm button to the right of the power supply unit. The alarm stops.
2. Remove the power cord from the power supply unit.
3. Loosen the power supply securing screw.
4. Pull the extraction handle to remove the power supply or placeholder unit.

Note - Remove the power supply unit with the extraction handle to prevent any possible damage.

Installing Power Supply Units

To install a replacement power supply unit:
1. Insert the power supply or placeholder unit into the power supply slot.
2. Firmly push the power supply or placeholder unit into the power supply slot.
3. Tighten the power supply securing screw.
4. Insert the power cord into the power supply socket.
5. Make sure that the green LED is illuminated.
