Feedback
Check Point is engaged in a continuous effort to improve its documentation.

Please help us by sending your comments
(mailto:cp_techpub_feedback@checkpoint.com?subject=Feedback on Smart-1 5 and 25 Getting Started Guide).
Health and Safety Information

Read the following warnings before setting up or using the appliance.

⚠️ **Warning** - Do not block air vents. A minimum 1/2-inch clearance is required.

⚠️ **Warning** - This appliance does not contain any user-serviceable parts. Do not remove any covers or attempt to gain access to the inside of the product. Opening the device or modifying it in any way has the risk of personal injury and will void your warranty. The following instructions are for trained service personnel only.

To prevent damage to any system board, it is important to handle it with care. The following measures are generally sufficient to protect your equipment from static electricity discharge:

- When handling the board, use a grounded wrist strap designed for static discharge elimination.
- Touch a grounded metal object before removing the board from the antistatic bag.
- Handle the board by its edges only. Do not touch its components, peripheral chips, memory modules or gold contacts.
- When handling processor chips or memory modules, avoid touching their pins or gold edge fingers.
- Restore the communications appliance system board and peripherals back into the antistatic bag when they are not in use or not installed in the chassis. Some circuitry on the system board can continue operating even though the power is switched off.
- Under no circumstances should the lithium battery cell used to power the real-time clock be allowed to short. The battery cell may heat up under these conditions and present a burn hazard.

⚠️ **Warning** - DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. REPLACE ONLY WITH SAME OR EQUIVALENT TYPE RECOMMENDED BY THE MANUFACTURER. DISCARD USED BATTERIES ACCORDING TO THE MANUFACTURER'S INSTRUCTIONS.

- Disconnect the system board power supply from its power source before you connect or disconnect cables or install or remove any system board components. Failure to do this can result in personnel injury or equipment damage.
- Avoid short-circuiting the lithium battery; this can cause it to superheat and cause burns if touched.
- Do not operate the processor without a thermal solution. Damage to the processor can occur in seconds.

**For California:**

Perchlorate Material - special handling may apply. See [http://www.dtsc.ca.gov/hazardouswaste/perchlorate](http://www.dtsc.ca.gov/hazardouswaste/perchlorate)

The foregoing notice is provided in accordance with California Code of Regulations Title 22, Division 4.5, Chapter 33. Best Management Practices for Perchlorate Materials. This product, part, or both may include a lithium manganese dioxide battery which contains a perchlorate substance.

Proposition 65 Chemical

Chemicals identified by the State of California, pursuant to the requirements of the California Safe Drinking Water and Toxic Enforcement Act of 1986, California Health & Safety Code s. 25249.5, et seq. ("Proposition 65"), that is "known to the State to cause cancer or reproductive toxicity" (see [http://www.calepa.ca.gov](http://www.calepa.ca.gov))

**WARNING:**

Handling the cord on this product will expose you to lead, a chemical known to the State of California to cause cancer, and birth defects or other reproductive harm. Wash hands after handling.
Federal Communications Commission (FCC) Statement:

Note: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

Information to user:

The user's manual or instruction manual for an intentional or unintentional radiator shall caution the user that changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. In cases where the manual is provided only in a form other than paper, such as on a computer disk or over the Internet, the information required by this section may be included in the manual in that alternative form, provided the user can reasonably be expected to have the capability to access information in that form.

Canadian Department Compliance Statement:

This Class A digital apparatus complies with Canadian ICES-003. Cet appareil numérique de la classe A est conforme à la norme NMB-003 du Canada.

Japan Class A Compliance Statement:

この装置は、クラスA情報技術装置です。この装置を家庭環境で使用すると電波妨害を引き起こすことがあります。この場合には使用者が適切な対策を講ずるよう要求されます。VCCI－A

European Union (EU) Electromagnetic Compatibility Directive

This product is in conformity with Low Voltage Directive 2006/95/EC, and complies with the requirements in the Council Directive 2006/95/EC relating to electrical equipment designed for use within certain voltage limits and the Amendment Directive 93/68/EEC.

Product Disposal

This symbol on the product or on its packaging indicates that this product must not be disposed of with your other household waste. Instead, it is your responsibility to dispose of your waste equipment by handing it over to a designated collection point for the recycling of waste electrical and electronic equipment. The separate collection and recycling of your waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local city office or your household waste disposal service.

Welcome

Thank you for choosing Check Point's Smart-1. We hope that you will be satisfied with this system and our support services. Check Point products are the most up to date and secure solutions available today.

Check Point also delivers worldwide educational, professional and support services through a network of Authorized Training Centers, Certified Support Partners and Check Point technical support personnel. We make sure that you get the most out of your security investment.

For more about the Internet Security Product Suite and other security solutions, see the Check Point Web site (http://www.checkpoint.com), or call Check Point at 1(800) 429-4391. For more technical information about Check Point products, consult the Check Point Support Center (http://supportcenter.checkpoint.com).

Welcome to the Check Point family. We look forward to meeting all of your current and future network, application and management security needs.

Smart-1 Overview

Smart-1 appliances deliver Check Point's market leading security management software blades on a dedicated hardware platform specifically designed for mid-size and large enterprise security networks. Based upon Check Point's software blade architecture, Smart-1 appliances deliver a unified management solution for network, IPS and endpoint security with unsurpassed extensibility.

- Provides a comprehensive set of security management Software Blades
- Maximize efficiency with a single unified management console for network and endpoint security
- Reduce costs and conserve resources with up to 12 TB of built-in storage capabilities
- Ensure operational continuity for the most demanding environments

Security Management Software Blades

Smart-1 Appliances includes the following Security Management Software Blades:

- Network Policy Management
- Endpoint Policy Management
- Logging & Status
- SmartProvisioning
- Monitoring
- User Directory
- Management Portal
- SmartEvent (SmartEvent Intro, Reporting and Event Correlation)
**SmartEvent**

Smart-1 includes SmartEvent, which is made up of SmartEvent Intro, Reporting and Event Correlation. SmartEvent provides centralized reporting and real-time security event correlation and management of your security data. Security teams no longer need to comb through the massive amount of data generated by the devices in their environment. Instead, they can focus on deploying resources on the important threats and trends that pose the greatest risk to their business.

You can configure Smart-1 as a Security Management server with SmartEvent. In R75 and higher, you can also configure Smart-1 as a dedicated server for SmartEvent.

**This document provides:**

- A brief overview of essential Smart-1 concepts and features
- A step by step guide to getting Smart-1 up and running

  **Note:** Screen shots in this guide may apply only to the highest model to which this guide applies.

**Terminology**

The following Smart-1 terms are used in this guide:

- **Security Gateway**: The security engine that enforces the organization’s security policy and acts as a security enforcement point.

- **Security Policy**: The policy created by the system administrator that regulates the flow of incoming and outgoing communication.

- **Security Management server**: The server used by the system administrator to manage the security policy. The organization’s databases and security policies are stored on the Security Management server and downloaded to the gateway. Smart-1 is a Security Management server.

- **SmartConsole**: GUI applications that are used to manage various aspects of security policy enforcement. For example, SmartView Tracker is a SmartConsole application that manages logs.

- **SmartDashboard**: A SmartConsole GUI application that is used by the system administrator to create and manage the security policy.
• **Management High Availability (HA):** Refers to a configuration in which a primary Security Management server has one or more backup secondary Security Management servers which are ready to take over in case of failure of the primary Security Management server.

**SmartEvent Terminology**

• **SmartEvent and Reporter Suite:** Includes SmartEvent and SmartReporter.
  
  • **SmartEvent:** A system that reads logs and generates events based on an Event Policy. An IPS event-only version is also available. Based on the configuration, SmartEvent contains these components:
    - **SmartEvent Client** (or **SmartEvent Intro Client**): A GUI that displays events (or IPS events) in many graphical, list and map forms and provides user control of the policy.
    - **SmartEvent Server** (or **SmartEvent Intro Server**): Holds the event (or IPS event) database, event queries, object values and policy definition.
    - **SmartEvent Correlation Unit:** An engine which reads logs and creates events.
  
  • **SmartReporter:** A system that reads logs and generates statistical and data reports. SmartReporter contains these components:
    - **SmartReporter Client:** A GUI to generate, define and display reports.
    - **SmartReporter Server:** Contains reports, report definitions and report schedules.
    - **Log Consolidator:** Reads logs, consolidates them according to the consolidation policy and adds them to the SmartReporter database.
Chapter 2

Mounting Smart-1 25 and 25B in a Rack

In This Chapter

Safety Instructions 11
Determining Space and Weight Requirements 12
Rack Mounting Hardware and Required Tools 13
Preparing the Appliance 14
Attaching the Mounting Brackets to the Slide 15
Attaching the Slide and Mounting Bracket Assembly to the Rack 16
Installing Smart-1 25 and 25B in the Rack 17

These instructions show how to install Smart-1 25 and 25B in a standard 19 inch rack.

Safety Instructions

Before installing your appliance in a rack cabinet, review the following guidelines:

- Make sure that the room air temperature is below 35°C (95°F).
- Do not block any air vents. Normally, 15 cm (6 in.) of air space in the rear and 5 cm (2 in.) in the front provides proper airflow.
- Install the appliances in the cabinet starting at the bottom and going up.
- Install the heaviest appliance at the bottom of the rack cabinet.
- Do not extend more than one device out of the rack cabinet at the same time.
- Connect the server to a properly grounded outlet.
- Do not overload the power outlet when installing multiple devices in the rack cabinet.
Determining Space and Weight Requirements

Allow sufficient vertical space in the rack for the appliance:

<table>
<thead>
<tr>
<th>Model</th>
<th>Height</th>
<th>Weight (Kg)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Smart-1 25 and 25 B</td>
<td>1U (1.75 inch, 44.5 mm)</td>
<td>13.5</td>
</tr>
</tbody>
</table>

The distance from the center of any hole to the center of the third hole above it is equivalent to 1U.

The mounting holes in a standard 19-inch (482.6 mm) server rack rail are arranged as follows:

When installing appliances, start measuring from the center of the two holes with closer spacing. Otherwise, the screw holes on the appliance may not match those on the rack.

</tbody>
</table>

**Rack Mounting Tools**
- Philips screwdriver. A magnetic head is recommended to hold screws in place and retrieve dropped screws. A powered screwdriver is useful.
- Pliers. Recommended but not essential.

**Preparing the Appliance**
Prepare the Smart-1 appliance for mounting in the rack. You don't need to do this in the server room.

**Attaching the Appliance Rails to the Appliance**
1. Separate the appliance rail from the slide. Push a release catch and slide the rail away from the slide until they separate.

2. Identify the front end. The front end is straight, not grooved. A serial number is engraved near the front end.
3. Position the appliance rail on one side of the appliance so that four holes are visible.
4. Attach the appliance rail to the appliance using three screws. One screw at each end, and one screw in one of the two middle holes.

5. Repeat, to attach an appliance rail to the other side of the appliance.
**Attaching the Appliance Ear Brackets (Optional)**

The appliance ear brackets are optional. Use them as a
- Handle, to make it easier to grab the front of appliance and slide it in and out.
- Buffer that prevents to appliance jamming in the rack in the closed position.

You can also use the appliance ear brackets to prevent the appliance from sliding in and out of the rack, by attaching the bracket ears to the rack vertical rail.

To connect the two appliance ear brackets to the front of the appliance:
1. Attach the appliance ear bracket to one side of the appliance using three screws.
2. Repeat for the other side of the appliance.

**Attaching the Mounting Brackets to the Slide**

Attach the mounting brackets to the slide. You don't need to do this in the server room.

1. Open the slide so it is fully extended. Press the latch to extend it.
2. Identify the front end and the back end of the slide. There is a piece of black plastic in the front end.
3. Attach a mounting bracket loosely to the front of a slide, using two screws and two threaded washers:
   a) Close the slide so it is fully retracted.
   b) Position a mounting bracket at the front of the slide so you see three holes straight though.
   c) Insert one of the screws through the round hole closest to the front of the slide, then through the slot in the bracket.
   d) Place a threaded washer on the screw. Leave it slightly loose. (You will tighten it later).
   e) Insert one more screw through the fourth hole in the slide (furthest from the front), then through the slot in the bracket.
   f) Place a threaded washer on the screw. Leave it slightly loose. (You will tighten it later).
4. Attach a mounting bracket to the back of a slide, using two screws and two threaded washers:
   a) Open the slide so it is fully extended.
   b) Position a mounting bracket at the back of the slide so you see four holes straight though.
   c) Insert one of the screws through the round hole closest to the back of slide, then through the slot in the bracket.
   d) Place a threaded washer on the screw, and tighten normally.
   e) Insert one more screw through the fourth, oval hole in the slide (furthest from the back), then through the slot in the bracket.
   f) Place a threaded washer on the screw, and tighten normally.
5. Close the slide so it is fully retracted.
   You now have a slide and mounting bracket assembly ready to attach to the rack.
6. Repeat for the second slide. Attach one mounting bracket (loosely) to the front of the slide and another (normally) to the back.
Attaching the Slide and Mounting Bracket Assembly to the Rack

Now attach the slide and mounting bracket assembly to the rack:

1. While standing in the front of the rack, place a slide and bracket assembly in position in one side of the rack.
2. Attach the mounting bracket to the rack vertical rail at the front using two screws and two washers. Place a washer between screw and the rack.
3. Go to the back of the rack.
4. Extend the slide so that it reaches the vertical rail at the back of the rack.
5. Attach the mounting bracket to the rack vertical rail at the back, using two screws and washers.
6. Go the front of the rack.
7. Tighten the screws that attach the slide to the front mounting bracket. These screws were earlier left intentionally loose. You may need to hold the threaded washer with a pair of pliers while you tighten the screw.
8. Repeat for the other side of the rack: Attach the slide and mounting bracket assembly to the other side of the rack.
Installing Smart-1 25 and 25B in the Rack

1. Extend the slide fully.
2. Carefully line up the appliance with the rail, and push it about half way in. You will hear a click.
3. To slide the appliance fully into the rack, press the slide latch on the left, then on the right. Take care not to trap a finger.
4. Slide the appliance into the rack.
Chapter 3

Configuring Smart-1

In This Chapter

Connecting the Power Cables and Power On 18
Available Software Images 18
Initial Configuration 18
Using the First Time Configuration Wizard on Gaia 19
Using the First Time Configuration Wizard on SecurePlatform 21
Installing the SmartConsole GUI Clients 25
Completing the Configuration 25
Advanced Configuration 25

The basic workflow for configuring Smart-1 is:
1. Connect the cables and power on.
2. Perform the initial configuration using the First Time Configuration Wizard.
3. Install the SmartConsole GUI clients.

Connecting the Power Cables and Power On

1. Connect the power cable(s).
2. Turn on the Power button to start the appliance.

Note - When a power supply fails or is not connected to the outlet, an alarm sounds continuously. If you hear the alarm, check that all power supplies are connected to the outlets. If needed, replace the faulty power supply immediately, and connect the new unit to the A/C outlet. See "Removing the Power Supply (on page 30)".

Available Software Images

Smart-1 comes with multiple software images. Select the software image that you want to use.
Reverting to a software image takes a few minutes. To follow the progress and see when the appliance is ready, connect to the appliance using a serial console.
For more about software images, see the Smart-1 Image Management Guide for the applicable version (http://support.checkpoint.com).

Note - Gaia is available for R75.40 and higher.

Initial Configuration

Do the initial configuration of the appliance with the First Time Configuration Wizard.
There are different First Time Configuration Wizard options for the Gaia and the SecurePlatform operating system.
Go to the applicable section:
- Using the First Time Configuration Wizard on Gaia (on page 19)
- Using the First Time Configuration Wizard on SecurePlatform (on page 21)
Using the First Time Configuration Wizard on Gaia

Use the First Time Configuration Wizard to do the initial configuration of the Gaia appliance.

**Note** - The pages that you see in the wizard depend on the software image and the options you select. You will not see all the pages that are in this section.

Starting the Gaia First Time Configuration Wizard

To start the First Time Configuration Wizard:

1. Connect a standard network cable to the appliance management interface and to your management network.  
   The management interface is marked **Mgmt**. This interface is preconfigured with the IP address 192.168.1.1.
2. Connect to the management interface from a computer on the same network subnet.  
   For example: IP address 192.168.1.x and net mask 255.255.255.0. This can be changed in the WebUI, after you complete the First Time Configuration Wizard.
3. To access the management interface, open a connection from a browser to the default management IP address: https://192.168.1.1
4. The login page opens. Log in to the system using the default username and password: **admin** and **admin**
5. Click **Login**.

**Note** - The features configured in the First Time Configuration Wizard are accessible after completing the wizard using the WebUI menu. The WebUI menu can be accessed by navigating to https://<appliance_ip_address>.

6. The **First Time Configuration Wizard** runs.

Welcome

The Welcome page introduces the product.

Available Releases

The appliance comes with different software images. Select the software image that you want to install. You can change to another software image after the First Time Configuration Wizard is completed.

If you select a SecurePlatform software image, use the SecurePlatform First Time Configuration Wizard to configure the appliance.

Authentication Details

The default password gives you access to the appliance. For security purposes, change it to a more secure password.

Date and Time Setup

Set the system time and date for the appliance:

- Manually
- From a time server, using Network Time Protocol (NTP)
Device Name

Set the host name, domain name, and DNS servers for IPv4 addresses. The host name must start with a letter and cannot be named com1, com2,...,com9.

You can use the Gaia WebUI to configure IPv6 DNS servers.

Network Connection

Connection Information - Configure the IPv4 interface information for the management interface. You can change the Management IP address. Connectivity is maintained with an automatically created secondary interface. After you complete the First Time Configuration Wizard, you can remove this interface in the Interface Management > Network Interfaces page.

DHCP Server - You can configure the Gaia appliance to be a Dynamic Host Configuration Protocol (DHCP) server.

To define a DHCP server on the Gaia appliance Mgmt interface:
1. In DHCP Server, select Enabled.
2. Define the IP Pool. This is the range of IPv4 addresses that the server assigns to hosts.
Configuring Smart-1

Products

Products

- **Security Management** - The server used by the system administrator to manage the security policy. The organization’s databases and security policies are stored on the Security Management server and downloaded to the Security Gateway.

Advanced

- **Define Security Management as** - In a Management High Availability deployment, define this Security Management server as **Primary** or **Secondary**. For more about Management High Availability, see the applicable version of the *Security Management Administration Guide*. Search for these guides in the Support Center ([http://supportcontent.checkpoint.com/solutions?id=sk91140](http://supportcontent.checkpoint.com/solutions?id=sk91140)).

Security Management Administrator

**Note** - You only see this page when the Gaia appliance is a Security Management server.

Define the name and password of an administrator that can connect to the Security Management server using SmartConsole clients.

Security Management GUI Clients

**Note** - You see this page when the appliance is a Security Management.

Define the clients that are allowed to connect to the appliance using a web browser or SSH client. These clients can manage the appliance using a web or SSH connection. For security reasons, we recommend that you do not use the *Any IP address* option.

Secure Internal Communication (SIC)

Define the Secure Internal Communication (SIC) **Activation Key**. The same key is used by the gateway object in SmartDashboard.

Summary

Click **Finish** to complete the First Time Configuration Wizard and configure the appliance. You can log in to the WebUI after some minutes.

**Note** - We recommend that you back up the system configuration. You can use the Gaia `add backup` command.

Using the First Time Configuration Wizard on SecurePlatform

Do the initial configuration of the SecurePlatform appliance with the First Time Configuration Wizard.

**Note** - The pages that you see in the wizard depend on the software image and the options you select. You will not see all the pages that are in this section.
Starting the First Time Configuration Wizard

1. Connect a standard network cable to the appliance's management interface and to your management network.
   The management interface is marked Mgmt. This interface is preconfigured with the IP address 192.168.1.1.

2. Connect to the management interface, from a computer on the same network subnet as the management interface.
   For example: IP address 192.168.1.x and netmask 255.255.255.0. This can be changed in the WebUI.

3. To access the management interface, open a connection from a browser to the default management IP address: https://192.168.1.1:4434.
   Note - Pop-ups must always be allowed on https://<appliance_ip_address>.
   The login page opens.

4. Log in with the default system administrator login name/password: admin/admin, and click Login.
   Note - The features configured in the wizard are accessible after completing the wizard via the WebUI menu. The WebUI menu can be accessed by navigating to https://<appliance_ip_address>:4434.

5. Change the administrator password, as prompted.
   The default password is provided to allow you access to Smart-1. For security purposes, you must change it to a more secure password.

6. In the Password recovery login token section, you can download a Login Token that can be used in the event a password is forgotten.
   We recommend that you save and store the password recovery login token file in a safe place.
   The First-Time Configuration Wizard runs. The Wizard presents a number of windows, in which you are prompted to configure Smart-1.

Welcome

The Welcome page summarizes the steps of the First Time Configuration Wizard.

Appliance Date and Time Setup

Configure date and time in the Date and Time Setup page. Click Apply.

Network Connections

Configure the network connections in the Network Connections page.

You can change the Management IP address. Connectivity is maintained with an automatically created secondary interface. You can remove this interface after you complete the First Time Configuration Wizard in the Network > Network Connections page.
Routing Table
Configure the routing settings on the Routing Table page.

DNS and Domain Settings
Set the Host, Domain and DNS Servers in the DNS and Domain Settings page.
The host name must start with a letter and cannot be named Com1, Com2, … , Com9.

Security Management Installation Type

Note - This page is only available in R75 or higher.

In the Installation Type page:

- **Security Management**: Configure Smart-1 as a Security Management server with all the management Software Blades, including SmartEvent.
- **Eventia Suite** (SmartEvent and Reporter Suite): Configure Smart-1 as a dedicated server for SmartEvent, and no other Software Blade. SmartEvent and Reporter Suite contains SmartReporter Server, SmartEvent Server, and SmartEvent Correlation Unit.

Security Management
If you choose to install a Security Management server, in the Security Management page:

- **Primary Security Management** is the Security Management server that will normally be active. To set up a Security Management server in a non-Management HA deployment, choose this option. In a Management HA deployment, if the Primary Security Management server fails, the Secondary Security Management server takes over.
- **Secondary Security Management** is the Security Management server that takes over if the Primary Security Management server fails. This option applies only in a Management HA deployment.
• **Log Server** is the repository for log entries generated on gateways. Check Point gateways send their log entries to the Log Server.

### SmartEvent and SmartReporter Suite Installation Type

Configure the SmartEvent and Reporter Suite applications to run on the server.

---

#### SmartEvent: A system that reads logs and generates events based on an Event Policy. An IPS event-only version is also available. **SmartReporter** is a system that reads logs and generates statistical and data reports. Choose one or more of these server components:

- **SmartReporter Server**: Contains reports, report definitions and report schedules.
- **SmartEvent Server**: Holds the event (or IPS event) database, event queries, object values and policy definition.
- **SmartEvent Correlation Unit**: An engine which reads logs and creates events.

For SmartEvent Intro, select both **SmartEvent Server** and **SmartEvent Correlation Unit**.

---

#### Web/SSH and GUI Clients Configuration

Define the clients that are allowed to connect to Smart-1 appliance using a Web browser, SSH client, or SmartConsole applications.

You can define a **Host** according to **Hostname** or **IP address**. Enter **Any** to manage Smart-1 from anywhere.

*Note* - It is not recommended to use the **Any** value for security reasons.

Additional options are available via the **WebUI** menu, after you complete the First Time Configuration Wizard.

---

#### Secure Internal Communication

If necessary, define the Secure Internal Communication (SIC) **Activation Key** that is used by the gateway object in SmartDashboard.

---

#### Download SmartConsole Applications

Configuring a security policy requires you to install the SmartConsole applications. In the **Download SmartConsole Applications** window, you can download SmartConsole and install it on Windows machines. For a detailed list of supported Windows operating systems for SmartConsole refer to the release notes of your Check Point version in the Check Point Support Center ([http://supportcenter.checkpoint.com](http://supportcenter.checkpoint.com)).
Summary

The Summary page appears.

Click Finish to complete the First-Time Configuration Wizard. The Appliance automatically restarts. This may take several minutes.

Note - It is recommended to backup the system configuration for system recovery purposes. The backup menu can be accessed via the WebUI interface under the Appliance menu.

Installing the SmartConsole GUI Clients

1. The WebUI menu can be accessed by navigating to https://<appliance_ip_address>:4434.
2. Login using the administrator username and password configured in step 4 of the Advanced Initial Configuration step.
3. Download the SmartConsole Installation package Product Configuration > Download SmartConsole > Download.

You have now completed the Smart-1 configuration.

To start working with your Smart-1 appliance as a Security Management Server refer to the Security Management Server Administration Guide for your software version in the Check Point Support Center (http://supportcenter.checkpoint.com).

Completing the Configuration

After you have finished the basic configuration of Smart-1, you can configure SmartEvent ("Configuring SmartEvent" on page 26).

Advanced Configuration

Advanced configuration on Gaia

Advanced configuration on Gaia can be done using the WebUI or the CLI.

Advanced configuration on SecurePlatform

Advanced configuration on SecurePlatform can be done using the sysconfig menu from the CLI.

Note - The sysconfig menu is only available after running the First Time Configuration Wizard in the WebUI.

Connecting to the CLI

After you complete the First Time Configuration Wizard, you can connect to the CLI (command line interface) of a Smart-1 using:

- The provided serial console cable (DTE to DTE)
- Terminal emulation software such as HyperTerminal and PuTTY (from Windows), or Minicom (from Unix/Linux systems).
  - Connection parameters for the appliance are: 9600 bps, no parity, 1 stop bit (8N1).
  - Set the Flow Control to None.
- An SSH connection to the management interface (if SSHD is configured).
Chapter 4

Configuring SmartEvent

In This Chapter

Preparing SmartEvent on Security Management Server 26
Configuring the SmartEvent Clients 26

This section explains how to get up and running with SmartEvent.

Preparing SmartEvent on Security Management Server

To configure SmartEvent, first establish connectivity between the components.

1. Launch SmartDashboard.
2. In SmartDashboard, create a new host for each computer that contains a component of SmartEvent:
   a) Select Manage > Network Object > New > Check Point > Host
   b) In the General Properties window, click Communication and enter the activation key.
   Note - If the Security Management Server and SmartEvent are installed on different sides of the firewall, add a rule that allows SIC traffic between them.
   c) The version is not entered automatically if the SmartEvent version is newer than the version of the Security Management Server. If so, select the most recent version available from the Version drop-down list.
   d) In the Management Software Blades list, select the blades that are installed on the new host.
3. Install the database on all log servers from which SmartEvent reads data: select Policy > Install Database and select the log servers as the targets.
4. To allow the SmartEvent Intro server to block attacks from specific IP addresses, configure the Security Management Server to accept SAM commands from the SmartEvent Intro server:
   a) On the Security Management Server, edit the $CPDIR/conf/sic_policy.conf file:
      Search for the section [Inbound rules], and add the following line under # sam proxy:
      DN_Mgmt ; Reporting_Tool; ANY; sam ; sslca
   b) From the command line in the Security Management Server computer, run the following commands:
      cpstop
      cpstart

Configuring the SmartEvent Clients

You must perform these configurations to make the components of the SmartEvent functional.

After you have accomplished the tasks for SmartEvent Intro, events will begin to appear in the SmartEvent Intro client.

After you have accomplished the tasks for SmartReporter, logs will be created and sent to the SmartReporter database. Reports can then be created.

Defining the Internal Network for SmartEvent

To help SmartEvent Intro determine whether events originated internally or externally, the Internal Network must be defined. Certain network objects are copied from the management server to the SmartEvent Intro
server during the initial synchronization and updated afterwards periodically. Define the Internal Network from these objects.

Note - If running SmartEvent Intro in a Security Management Server environment, the internal network will be defined automatically from firewall topology information. You can customize the internal network definition.

**To define the Internal Network:**
1. Start the SmartEvent Intro Client.
2. From the **Policy** view, select **General Settings > Initial Settings > Internal Network**.
3. Add objects (hosts, networks, groups, IP ranges) that define your environment’s internal network.

**Defining Correlation Units and Log Servers for SmartEvent**
1. From the **Policy** view of the SmartEvent Intro client, select **General Settings > Initial Settings > Correlation Units**.
2. Select **Add**.
3. Click the button of the **Correlation Unit** field.
4. In the **Select Objects** window, select a Correlation Unit.
5. Click **OK**.
6. Click **Add** and select the Log Servers available as data sources to the Correlation Unit.
7. Select **Save**.
8. From the **Actions** menu, select **Install Events policy**.

At this point, SmartEvent Intro will begin to read logs and detect events.

To learn how to manage and fine-tune the system using the SmartEvent Intro Client, see the **SmartEvent Administration Guide** for your software version on the Check Point Support Center (http://supportcenter.checkpoint.com).

**Creating a Consolidation Session for SmartReporter**

The Consolidation session reads logs from the log server and adds them to the SmartReporter database.

- If there is a single log server in the environment, the Consolidation session is automatically created.
- If there is more than one log server, you must create the Consolidation session for each log server.

**To create a Consolidation session:**
1. In the **Selection Bar** view, select **Management > Consolidation**.
2. Select the **Sessions** tab.
3. Click **Create New** to create a new session.
   - The **New Consolidation Session** window appears.
4. Select the log server from which logs will be collected and will be used to generate reports.
5. Click **Next**.
   - The **New Consolidation Session** window appears.
6. Choose whether to use the default source logs and database tables, or select custom source logs and database tables for consolidation.

If you selected **Select default log files and database**, click **Finish** to complete the process. The source of the reports will be preselected logs. The report data will be stored in the default database table named **CONNECTIONS**. The preselected logs are the sequence of log files that are generated by Check Point products. The preselected logs session will begin at the beginning of the last file in the sequence, or at the point the sequence was stopped.

If you want to customize the Consolidation session refer to the **SmartReporter Administration Guide** for your software version on the Check Point Support Center (http://supportcenter.checkpoint.com).
Chapter 5

Smart-1 Hardware

In This Chapter

Smart-1 5 
Smart-1 25 
Customer Replaceable Parts 
Hard Disk Drives

This chapter provides instructions for installing and removing hardware components on the Smart-1 appliance.

Smart-1 5

This section describes the features and components located on the Smart-1 5 appliance.

Front Panel

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>LCD display screen</td>
</tr>
<tr>
<td>2</td>
<td>Screen operation keys</td>
</tr>
<tr>
<td>3</td>
<td>Console port - for a serial connection to the appliance using a terminal emulation program such as HyperTerminal</td>
</tr>
<tr>
<td>4</td>
<td>USB ports</td>
</tr>
<tr>
<td>5</td>
<td>Management configuration port</td>
</tr>
<tr>
<td>6</td>
<td>Built-in Ethernet ports (Lan1-Lan4)</td>
</tr>
</tbody>
</table>

LCD Display Screen

Use the LCD screen to perform basic management operations of the Smart-1 5 appliance.

- Configure the management IP address, netmask and default gateway
- Reboot and shut down the appliance
Smart-1 25
This section describes the features and components located on the Smart-1 25 appliance.

Front Panel
Key | Description
--- | ---
1 | Console port - for a serial connection to the appliance using a terminal emulation program such as HyperTerminal and PuTTY
2 | USB ports
3 | LOM (Lights-out Management) port
4 | Management configuration port
5 | Built-in Ethernet ports (Lan1 - Lan3)
6 | Power switch
7 | Hard disk drives

**Hard Disk Drives**
Smart-1 25 appliances contain four (RAID10) hard disk drives that you can hot-swap.

**Customer Replaceable Parts**
To ensure maximum availability and ease of maintenance, the Smart-1 25 and 25B appliance contains the following customer replaceable parts:
- Two power supplies
- Two hard disk drives (Smart-1 25B)
- Four hard disk drives (Smart-1 25)

Unless directed to do so by Check Point technical support, customers are prohibited by warranty and support agreements from replacing any parts. Customers are prohibited from opening the Smart-1 case under any circumstances.

**Power Supply**
This section presents the procedures for removing and installing a power supply unit. The Smart-1 appliance contains two redundant power supplies. It is not necessary to power off the appliance before adding or removing a power supply.

**Removing the Power Supply**
**To remove a power supply unit:**
1. If the power supply alarm sounds, press the red alarm button to the right of the power supply. This will stop the alarm.
2. Remove the power cord.
3. Loosen the retaining screw located above the power socket.
4. Pull the extraction handle to remove the power supply unit.

**Note** - Use only the extraction handle to remove the power supply unit. To prevent damaging the power supply, do not pull on the retaining screw, power cord clip or any other part of the unit.
Installing the Power Supply

To install a replacement power supply:
1. Insert the power supply into its slot and push firmly until it clicks into place.
2. Tighten the retaining screws.
3. Insert the power cord.

Hard Disk Drives

Smart-1 25 contains 4 hot-swappable redundant hard disk drives (RAID 10).
Smart-1 25 performs RAID10 mirroring and striping across all four hard disk drives using a dedicated LSI Logic RAID controller.

Use the `raidconfig` SecurePlatform command to perform basic maintenance and monitoring procedures on your Smart-1 RAID array.

Usage: `raidconfig [status | rebuild | extendstorage | extendfs | alarmon | alarmoff]`

- `status` - Shows the status of RAID controllers and virtual disks.
- `rebuild` - Rebuilds degraded volumes. Use this option after replacing one or more disks in the RAID array.
- `extendstorage` – Usable only on Smart-1 150.
- `extendfs` – Usable only on Smart-1 150.
- `alarmon` - Enables alarm sound.
- `alarmoff` - Disables alarm sound.

Removing a Hard Disk Drive

Any single hard disk drive can be safely removed without risking the integrity of the RAID array or compromising the data.

⚠️ Warning - When removing more than one hard disk drive, do not remove hard disk drives that are next to each. Failure to do so will result in loss of all information!

The following table represents the RAID array layout. Only remove hard disk drives 1 and 3 together or hard disk drives 2 and 4 together to prevent a loss of all information.

<table>
<thead>
<tr>
<th>Hard disk drive 1</th>
<th>Hard disk drive 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Hard disk drive 3</td>
<td>Hard disk drive 4</td>
</tr>
</tbody>
</table>

To remove a hard disk drive:
1. Unlock the hard disk drive.
2. Slide the release latch toward the left.
3. Remove the hard disk drive from its slot.

Installing a Hard Disk Drive

To install a hard disk drive:
1. Slide the replacement hard disk drive into the slot.
2. Push the extraction handle until it closes and the drive clicks into place.
3. If the command `raidconfig status` shows that the new hard disk drive is not rebuilding, run the command `raidconfig rebuild` to initiate the rebuild of the RAID array on the new disk drive.
Chapter 6

Restoring Factory Defaults

In This Chapter

- Restoring Using the WebUI 32
- Restoring Using the Console Boot Menu 32
- Restoring Using the LCD Panel 33

You may restore the factory default images on the appliance using the WebUI, a console connection application (such as HyperTerminal) or the LCD panel.

⚠️ Important - Restoring factory default images will delete all information on the appliance including images, backup files, and logs.

Restoring Using the WebUI

Use the WebUI of the applicable operating system to restore the appliance to the factory default settings. You can select one of the software images that are available on the appliance.

**Gaia**

Use the Gaia WebUI to restore the default factory settings.

To restore a Gaia appliance with the WebUI:
1. Open an Internet browser to the management IP address, https://<appliance_ip_address>
2. Log in to the WebUI of the appliance using the administrator username and password.
3. In the WebUI, click Maintenance > Factory Defaults.
   - The Factory Defaults window opens.
4. Select the image version that you are restoring.
5. Click Apply.

**SecurePlatform**

Use the SecurePlatform WebUI to restore the default factory settings.

To restore a SecurePlatform appliance with the WebUI:
1. Open Internet Explorer and navigate to the management IP address, https://<appliance_ip_address>:4434
2. Log in to the WebUI of the appliance using the administrator username and password.
3. In the WebUI, click Appliance > Image Management.
   - The Image Management window opens.
4. Select the image version that you are restoring.
5. Click Revert.

Restoring Using the Console Boot Menu

To restore the appliance to its default factory configuration using the console boot menu:
1. Connect the supplied DB9 serial cable to the console port on the front of the appliance.
2. Connect to the appliance using a terminal emulation program such as Microsoft HyperTerminal or PuTTY.

3. Configure the terminal emulation program:
   - In the HyperTerminal Connect To window, select a port from the Connect using list.
   - In PuTTY select the Serial connection type.

4. Define the serial port settings: 9600 BPS, 8 bits, no parity, 1 stop bit.

5. From the Flow control list, select None.

6. Connect to the appliance.

7. Turn on the appliance.

8. The appliance initializes and status messages are shown in the terminal emulation program.

```

```

```
Verifying DMI Pool Data . . . . . . . .
Press any key to see the boot menu (Booting in 5 seconds)
```

9. When this message is shown, you have approximately four seconds to hit any key to activate the Boot menu.

10. From the Boot menu, select the relevant Reset to factory defaults image.

11. Press Enter.

## Restoring Using the LCD Panel

To restore the Smart-1 appliance to its default factory configuration using the LCD Panel keys:

1. Reboot or power on the appliance.

2. When the countdown begins, press any of the arrow keys.

    ![Starting in 5 seconds](image)

    The Boot menu appears.

3. Using the arrow buttons, scroll to the relevant image version, and then press the UP arrow.

4. Confirm the reset by pressing the UP arrow.
Pressing any other key causes the **Action Canceled** message to appear:

```
Action Canceled
Press any key
```

At this point, pressing any key returns you to the boot menu.

5. Once you have confirmed the reset, wait for the appliance to restore the factory image. While the appliance is restored to the default image, a **Reverting image don't turn off** message displays continuously.

When the appliance has been restored to its default factory configuration, the appliance reboots and the **Initializing** message appears.

```
Initializing
Please wait...
```
Chapter 7

Lights Out Management

In This Chapter

- Introduction 35
- Initial Login 35
- Basic Configuration Options 36
- Remotely Controlling the Appliance 36
- Remotely Controlling the Power of the Appliance 36
- Managing LOM Card Users 36
- Configuring LOM Keyboard and Mouse 37
- Configuring LOM Network 38
- Setting the Date and Time 38
- Defining a LOM Login Message 38

This chapter discusses the Lights-Out Management (LOM) integrated card that is supplied with the Smart-1 25 and 25B appliances and basic configuration options.

Introduction

The Check Point Lights Out Management (LOM) card lets you remotely control Check Point appliances using a dedicated management channel. Lights Out Management can also work when the appliance is turned off or not responding.

Initial Login

To log in to the Lights Out Management WebUI:

1. Open a web browser and enter the default IP address of the LOM card: 192.168.0.100. The login window appears.
2. Login with the default username (admin) and password (admin), all lower case.

Note - Following 30 minutes of inactivity you are automatically be logged out.
LOM Card Ports
Make sure that all of these ports are open to use all the Lights Out Management features.
- 2068
- 5120
- 7578

Basic Configuration Options
The options in the main menu on Lights Out Management home page let you configure these settings:
- Remotely control the appliance
- Remotely control the power of the appliance
- Manage Lights Out Management users
- Configure Lights Out Management keyboard and mouse settings
- Configure Lights Out Management network settings
- Set date and time
- Define a Lights Out Management login message

Remotely Controlling the Appliance
The Appliance Control menu option enables you to access the appliance via a web interface (Java application). Prior to using this option, ensure that you have Java Runtime installed on the host machine.

To run the remote console:
1. Click the Appliance Control menu option.
2. Select KVM Console and then Open Console. A new window opens that enables you to remotely control the Smart-1 appliance.

Remotely Controlling the Power of the Appliance
Using the LOM card, it is possible to remotely switch ON the Smart-1 appliance even if the power is off, switch OFF the appliance, or reset the appliance.

Note - The main power switch at the rear of the appliance must be turned ON. If the switch is in the OFF position, remote power management is not possible.

To turn ON/OFF or reset the appliance:
1. Click the Appliance Control menu option.
2. Select Power Control, the relevant option and click Apply Changes.

Managing LOM Card Users
You can create, modify, and delete users. You can also assign privileges to users.

To create a user:
1. Click the LOM User Management menu option. The User Management page appears.
2. Select a row and click Create. The User Add dialog box appears.
3. Enter the following:
   - User name: a user name (maximum fourteen characters)
   - Password: a password for the login name. The password must have a minimum of 5 and a maximum of 14 characters.
   - Confirm Password: confirm the password.
- **Network Privileges**: assign the Administrator or Operator privileges according to the table below.

## Network Privileges

<table>
<thead>
<tr>
<th></th>
<th>Administrator</th>
<th>Operator</th>
</tr>
</thead>
<tbody>
<tr>
<td>Login</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Enter KVM console</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Create user</td>
<td>Yes</td>
<td>N/A</td>
</tr>
<tr>
<td>Modify user</td>
<td>Yes</td>
<td>N/A</td>
</tr>
<tr>
<td>Delete user</td>
<td>Yes</td>
<td>N/A</td>
</tr>
<tr>
<td>Date/time settings</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Edit login message</td>
<td>Yes</td>
<td>N/A</td>
</tr>
<tr>
<td>Remote power management</td>
<td>Yes</td>
<td>Yes</td>
</tr>
<tr>
<td>Network setting</td>
<td>Yes</td>
<td>N/A</td>
</tr>
<tr>
<td>Keyboard/mouse setting</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**To modify a user:**
1. Select an existing user from the list and click **Modify**. The User Modify dialog box appears.
2. Modify the fields as required.
3. To change the password, select **Change Password**.
4. Click **Modify User** to apply the changes.

**To delete a user:**
1. Select an existing user from the list and click **Delete**. A message appears.
2. Click **OK**.

## Configuring LOM Keyboard and Mouse

To use the remote console feature described above, specify the operating system that the host machine is running.

**To configure keyboard and mouse settings:**
1. Click the **KVM Settings** menu option.
2. Select the relevant option:
   - Absolute (for Windows)
   - Relative (for Linux)
3. Click **Apply Changes**.
Configuring LOM Network

The network settings option enables you to change the default IP address and other basic network settings of Lights Out Management.

To configure the network settings:
1. Click the LOM Settings menu option and select Network.
2. Select Static and enter the following values.
   • IP address: the IP address of the LOM.
   • Subnet mask: the subnet mask of the LOM's local network.
   • Gateway IP address: the Default Gateway IP address.
   • Remote Console and HTTPS port: port number on which the Remote Console server and HTTPS server are listening.

Setting the Date and Time

This option enables you to manually change the date and time of the LOM card.

Defining a LOM Login Message

This option enables you to define the login message that appears when accessing LOM via a browser.

To edit a login message:
1. Click the Device Settings menu option and select Login Message.
2. Enter the login message text.
3. Click Apply Changes.
Chapter 8

Registration and Support

In This Chapter
- Registration 39
- Support 39
- Where to From Here? 39

Registration

Smart-1 requires a specific license to operate. Obtain a license and register it (http://register.checkpoint.com/cpapp).

Connect to the WebUI of the appliance to find the MAC address that is required to obtain a license.
- Gaia - From Advanced mode, select Maintenance > Licenses.
- SecurePlatform - Select Information > Appliance Status.

Support

For additional technical information about Check Point products, consult the Check Point Support Center (http://supportcenter.checkpoint.com).

Where to From Here?

You have now learned the basics that you need to get started. The next step is to obtain more advanced knowledge of your Check Point software.

See the relevant documentation for your software version on the Check Point Support Center:

Check Point documentation is available on the Check Point Support Center (http://supportcenter.checkpoint.com).

Be sure to also use the Online Help when you are working with the Check Point SmartConsole clients.
