IPS-1™ Quick Start Guide

Includes Check Point Software Blades
1

Power Up Your Check Point IPS-1 Appliance

- Connect the power cable to the power port on the IPS-1 appliance rear panel and plug it into a power outlet.
- Turn the power on.

2

Connect Your PC for Initial Setup

- Initial setup must be done from a PC connected to the appliance’s internal interface via the included Ethernet cable. After completing the initial connection, the First Time Configuration Wizard will guide you through the process of configuring the appliance.
- Before continuing, make sure your PC is configured correctly.
For Windows XP Operating Systems

- Click > Settings > Control Panel > Network Connections.
- Double-click Local Area Connection.
- In the General tab, click Properties.
- In the IP address field, enter 192.168.1.2.
- In the Subnet mask field, enter 255.255.255.0.
- Leave the Default gateway and DNS settings fields empty.
- Click OK and close the dialog boxes.

For Windows Vista Operating System

- Click > Control Panel > Network and Internet > Network and Sharing Center > Manage network connections.
- Right-click Local Area Connection, and then click Properties. If you are prompted for an administrator password or confirmation, type the password or provide confirmation.
- Click the Networking tab. Under This connection uses the following items, click Internet Protocol Version 4 (TCP/IPv4), and then click Properties.
- In the IP address field, enter 192.168.1.2.
- In the Subnet mask field, enter 255.255.255.0.
- Leave the Default gateway and DNS settings fields empty.
- Click OK and close the dialog boxes.
Configure Your IPS-1 Appliance

- Connect a serial cable to the console output of the appliance, or open an ssh session from a console (for example, using PuTTY for Windows or the SSH command from a Linux/Unix machine). See the Getting Started Guide for more details.

- Log in with the default system administrator login name/password, admin/admin.

- After logging in the first time and changing the default login name and password, you can start the first time configuration wizard by typing `sysconfig` at the cpmodule prompt. The wizard will guide you through the initial system configuration process. Enter the required parameters until the system indicates it has completed configuring the device.
Appliance Registration
IPS-1 appliances require a license to be installed prior to operation.

To license and register your appliance, please visit:
