SandBlast TE2000XN Appliances Replacing AC Power Supply Units

Check Point TE2000XN appliances have a redundant power supply unit (PSU). They support AC PSUs. If necessary, you can replace a PSU. Note that all PSUs on an appliance must be of the same type (AC).

**Important** - Make sure you are electromagnetically grounded before you install, uninstall, or replace a PSU. ESD (electrostatic discharge) can damage the appliance.

Removing a Power Supply Unit

Before you remove a power supply unit, we recommend that you make sure that either:

- A second AC power supply is installed and connected to a working power source.
  
  Or

- You shutdown the appliance.

To remove a power supply unit:

1. Remove the power cord from the power supply unit.
2. If the alarm sounds, press the alarm off button to the right of the power supply units.
   
   The alarm stops.
3. Press and hold the release lever down as shown.

4. While holding the release lever, pull the extraction handle to remove the power supply unit.

Note - Remove the power supply unit only with the extraction handle to prevent any possible damage.

Installing a Power Supply Unit

To install a replacement power supply unit:

1. Insert the power supply unit into the power supply slot.
2. Push the power supply unit in until the release lever clicks.
3. Insert the power cord into the power supply socket.
4. Make sure that the power LED is illuminated.
Installing the Power Cable Restraint

You can use the power cable restraint to prevent accidental removal of the power cable.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>

<tbody>
<tr>
<td>1</td>
<td>Restraint anchor</td>
</tr>
<tr>
<td>2</td>
<td>Cable loop</td>
</tr>
<tr>
<td>3</td>
<td>Restraint strip tab</td>
</tr>
<tr>
<td>4</td>
<td>Restraint strip</td>
</tr>
</tbody>
</table>

To install the power cable restraint:

1. If a power cable is connected to the power supply inlet, disconnect it.
2. Find the restraint strip slot on top of the power supply inlet.
3. Make sure that the cable loop on the restraint faces the power supply inlet.
4. Insert the restraint strip anchor into the slot until it snaps and locks.
5. Connect the power cable to the power supply inlet.

6. Pull the restraint tab to the side to move the cable loop on the restraint strip.

7. Move the cable loop until you can put it around the power cable.

8. Insert the open side of the cable loop into the loop slot until it is tight against the power cable.

9. Make sure the cable loop is secured and the power cable cannot be removed.

PSU Configuration and Monitoring

See the SandBlast TE2000XN Appliances Getting Started Guide for PSU configuration and monitoring options.
